

miniSQL Documentation

Release 1.0.0

DevOpSec

May 05, 2019

1	miniSQL main	1
2	Indices and tables	3
	Python Module Index	5
	Index	7

miniSQL main

```
class minisql.MinisqlShell ( completekey='tab', stdin=None, stdout=None )

    do_bye ( arg )
        Stop recording, close the turtle window, and exit: BYE

    do_circle ( arg )
        Draw circle with given radius an options extent and steps: CIRCLE 50

    do_color ( arg )
        Set the color: COLOR BLUE

    do_forward ( arg )
        Move the turtle forward by the specified distance: FORWARD 10

    do_goto ( arg )
        Move turtle to an absolute position with changing orientation. GOTO 100 200

    do_heading ( arg )
        Print the current turtle heading in degrees: HEADING

    do_home ( arg )
        Return turtle to the home position: HOME

    do_left ( arg )
        Turn turtle left by given number of degrees: LEFT 90

    do_playback ( arg )
        Playback commands from a file: PLAYBACK rose.cmd

    do_position ( arg )
        Print the current turtle position: POSITION

    do_record ( arg )
        Save future commands to filename: RECORD rose.cmd

    do_reset ( arg )
        Clear the screen and return turtle to center: RESET

    do_right ( arg )
        Turn turtle right by given number of degrees: RIGHT 20
```

do_undo (*arg*)

Undo (repeatedly) the last turtle action(s): UNDO

precmd (*line*)

Hook method executed just before the command line is interpreted, but after the input prompt is generated and issued.

minisql.interpretQueries (*queries*)

Interpret queries as a list of commands to execute in miniSQL language

Parameters *queries* – list of queries to process

Returns False to exit, True to continue (applicable to miniSQL shell)

minisql.main ()

Parse command line arguments and decide how data is processed

Returns 0 on success, 1 on failure

minisql.parse (*arg*)

Convert a series of zero or more numbers to an argument tuple

minisql.parseQueries (*raw_queries*)

Parse input into interpretable queries based on a SQL-like syntax

Queries are delimited by a semicolon and query commands are delimited by whitespace

Parameters *raw_queries* – command string input

Returns list of queries (each as a list of commands)

minisql.supportsColor (*stream*)

Check if terminal supports ASCII color codes

Parameters *stream* – file stream to check

Returns True == supported, False == not supported

minisql.validateStdinReadable ()

Check if stdin has been redirected by parent shell

See the following table for supported input types.

Note that as of python v3.3 symlinks are followed by default.

Stdin Type	Supported	Program Context
directory	no	
keyboard	yes	miniSQL shell
storage	no	
file	yes	miniSQL cmd
symlink	no	
pipe	yes	miniSQL cmd
socket	no	

Returns not readable == -1, 0 == readable in cmd, 1 == readable in shell

Indices and tables

- *Index*
- *Module Index*
- *Search Page*

m

`minisql`, 1

D

`do_bye()` (minisql.MinisqlShell method), 1
`do_circle()` (minisql.MinisqlShell method), 1
`do_color()` (minisql.MinisqlShell method), 1
`do_forward()` (minisql.MinisqlShell method), 1
`do_goto()` (minisql.MinisqlShell method), 1
`do_heading()` (minisql.MinisqlShell method), 1
`do_home()` (minisql.MinisqlShell method), 1
`do_left()` (minisql.MinisqlShell method), 1
`do_playback()` (minisql.MinisqlShell method), 1
`do_position()` (minisql.MinisqlShell method), 1
`do_record()` (minisql.MinisqlShell method), 1
`do_reset()` (minisql.MinisqlShell method), 1
`do_right()` (minisql.MinisqlShell method), 1
`do_undo()` (minisql.MinisqlShell method), 2

I

`interpretQueries()` (in module minisql), 2

M

`main()` (in module minisql), 2
`minisql` (module), 1
`MinisqlShell` (class in minisql), 1

P

`parse()` (in module minisql), 2
`parseQueries()` (in module minisql), 2
`precmd()` (minisql.MinisqlShell method), 2

S

`supportsColor()` (in module minisql), 2

V

`validateStdinReadable()` (in module minisql), 2
